NAME

MOVIES IN CITY

PROJECT NUMBER

S NO.	NAME	BRANCH	ROLL NO.
1.	AKASH REDDY K	CSE A	23P81A0531
2.	KRUSHITH N	CSE A	23P81A0544
3.	PARTHIV KUMAR K	CSE A	23P81A0530
4.	SANTHI SRI P	CSE B	23P81A05C0
5.	SNEHITH M	CSE B	23P81A05B3

SOFTWARE USED

DEV C++

OPERATING SYSTEM

DOCUMENTATION

Save details of at least 5 theatres in a city in a binary file

REQUIREMENTS

- 1. Search movies between From to To Date and show all movies, all shows & in all theatres.**
- 2. Search Movie for particular date**
- 3. List of all theatres**

TOPICS COVERED

ARRAYS

POINTERS

STRUCTURES

LOOPS

BINARY FILES

MENU DRIVE

USER DEFINED HEADER FILES

DYNAMIC MEMORY ALLOCATION

PROCEDURAL PROGRAMMING

- **void add_theatres_data()**
- **void list_of_theatres()**
- **void movie_available()**
- **void range_of_dates()**
- **int main()**

ALGORITHM

STEP 1:Start

STEP 2:Define a structure named "Movie"

Members of the strucure:-

theatrename	-String used to store Theatre name
moviename1	-String used to store movie name.
*showtime1	-Pointers to characters storing showtime1
*showtime2	-Pointers to characters storing showtime2
*showtime3	-Pointers to characters storing showtime3
start_date	-Variable used to store start date
start_month	-Variable used to store start month
start_year	-Variable used to store start year
end_date	-Variable used to store end date
end_month	-Variable used to store end month
end_year	-Variable used to store end year.

ALGORITHM

STEP 3:add_theatres_data()- User-Defined function is used to add theatre information and movies.

STEP 4:list_of_theatres()- User-Defined function to display a list of all theatres.

STEP 5:movie_available()- User-Defined function to find movies available on a particular date.

STEP 6:range_of_dates()- User-Defined function to find movies available in a date range.

STEP 7:In the main function ,display then menu

STEP 8:Enter the choice

STEP 9: IF(choice==1) , goto 15,else10

STEP 10:IF(choice==2) , goto 20,else11

STEP 11:IF(choice==3) , goto 23 ,else12

STEP 12:IF(choice==4) , goto 27,else13

STEP 13:IF(choice==5) , Free all the showtime values & goto31

STEP 14:IF(default) , print "Your choice doesn't match." ,goto 8.

STEP 15:In the add_theatres_data() function:

Open a binary file in append mode ("ab+") to store theatre's information.

ALGORITHM

STEP 16:If(NULL) ,print"Error in opening file" ,goto 8 ,else 17

STEP 17:Enter number of theaheer you want to add.

STEP 18:Dynamically allocate memory for showtime strings.

STEP 19:Take input for theatre details from the user and write to the file.

STEP 20: Close the file ,goto 8.

STEP 21:In the list_of_theatres() function:

 Open the binary file in read mode ("rb+").

STEP 22:If(NULL) ,print"Error in opening file" ,goto 8 ,else 23

STEP 23:Read and print details of each theatre from the file.

STEP 24:Close the file , goto 8.

STEP 25:In the movie_available() function:

 Open the binary file in read and write mode ("rb+").

STEP 26:If(NULL) ,print"Error in opening file" ,goto 8 ,else 27

STEP 27:Take input for a particular search date from the user(in DD MM YYYY).

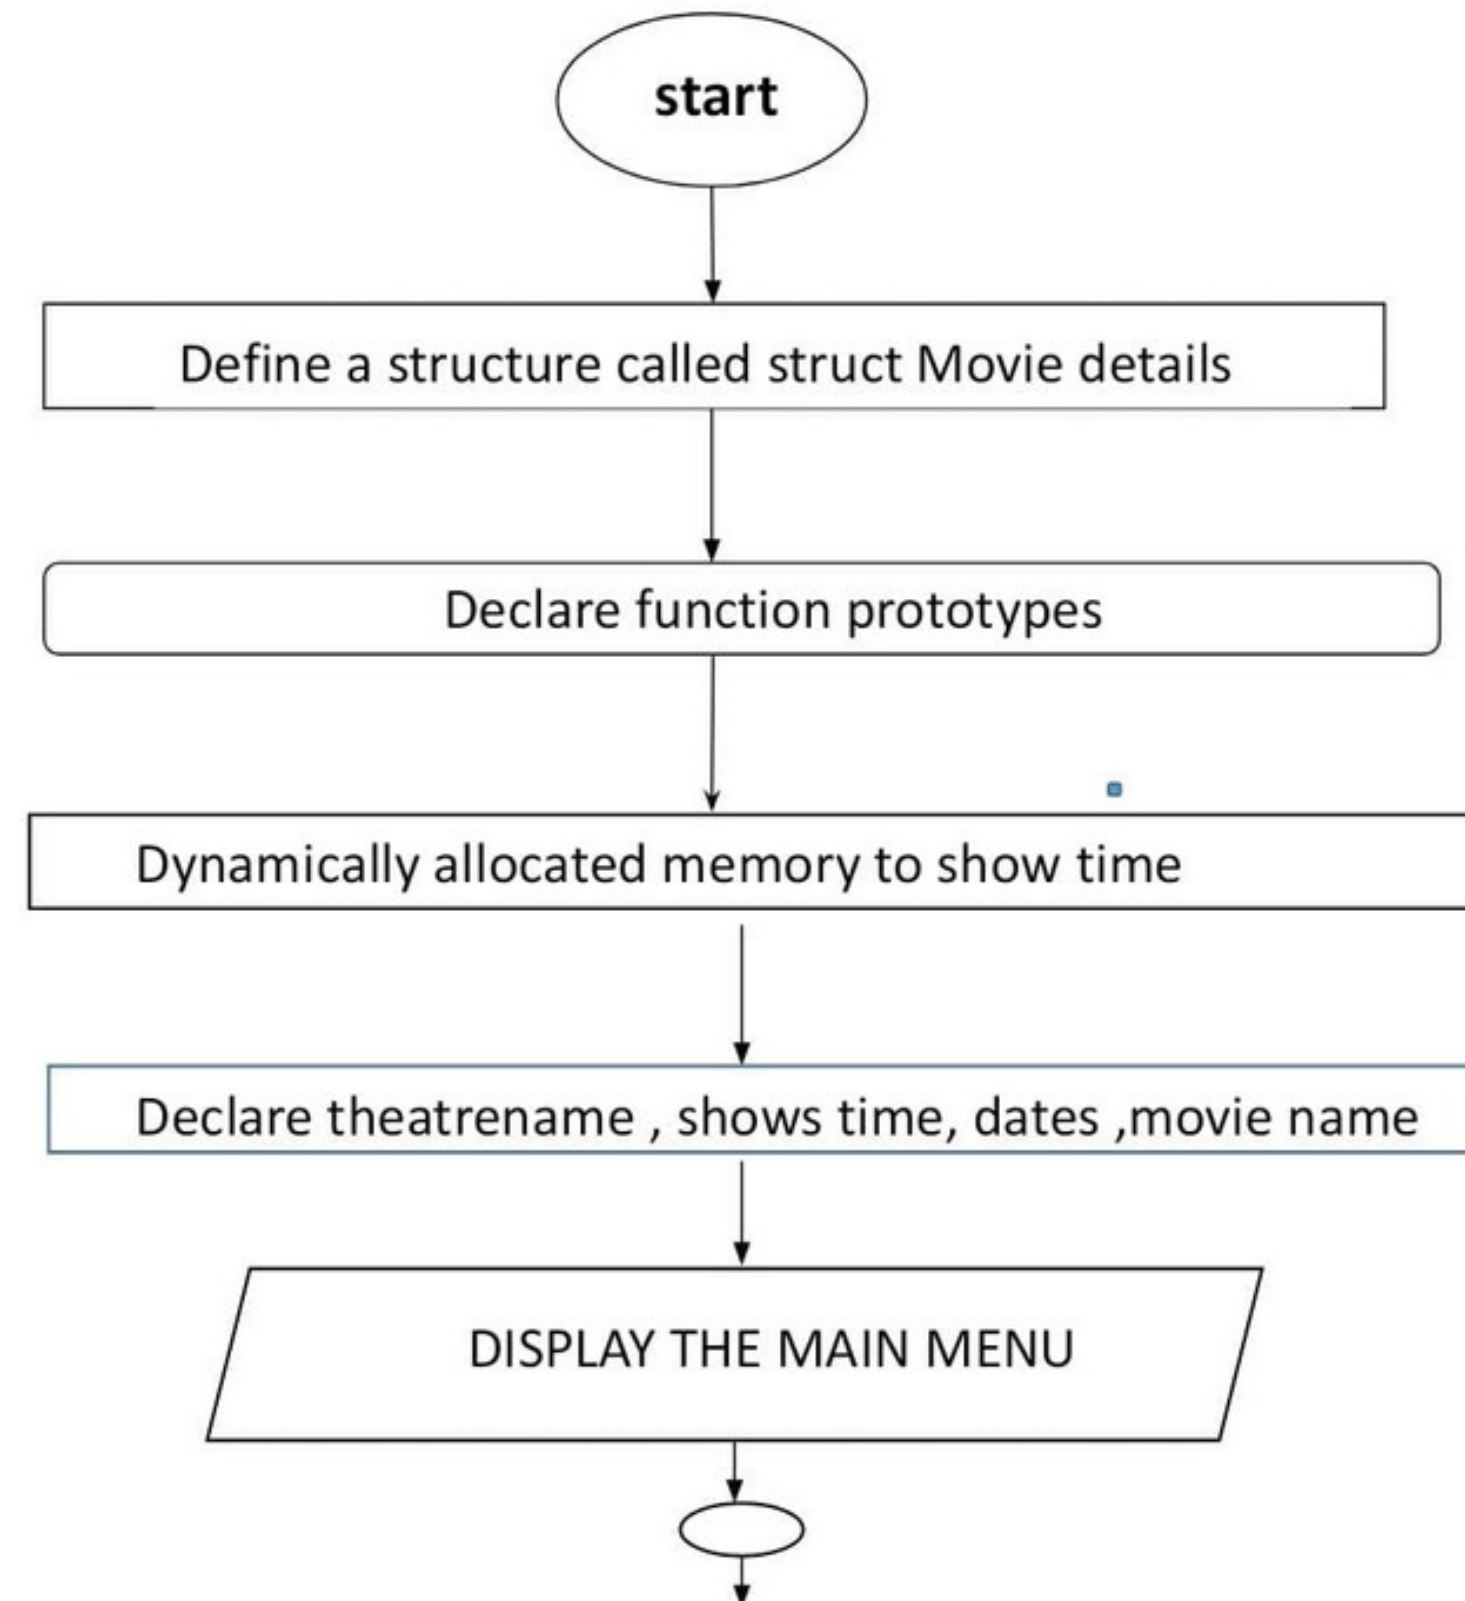

ALGORITHM

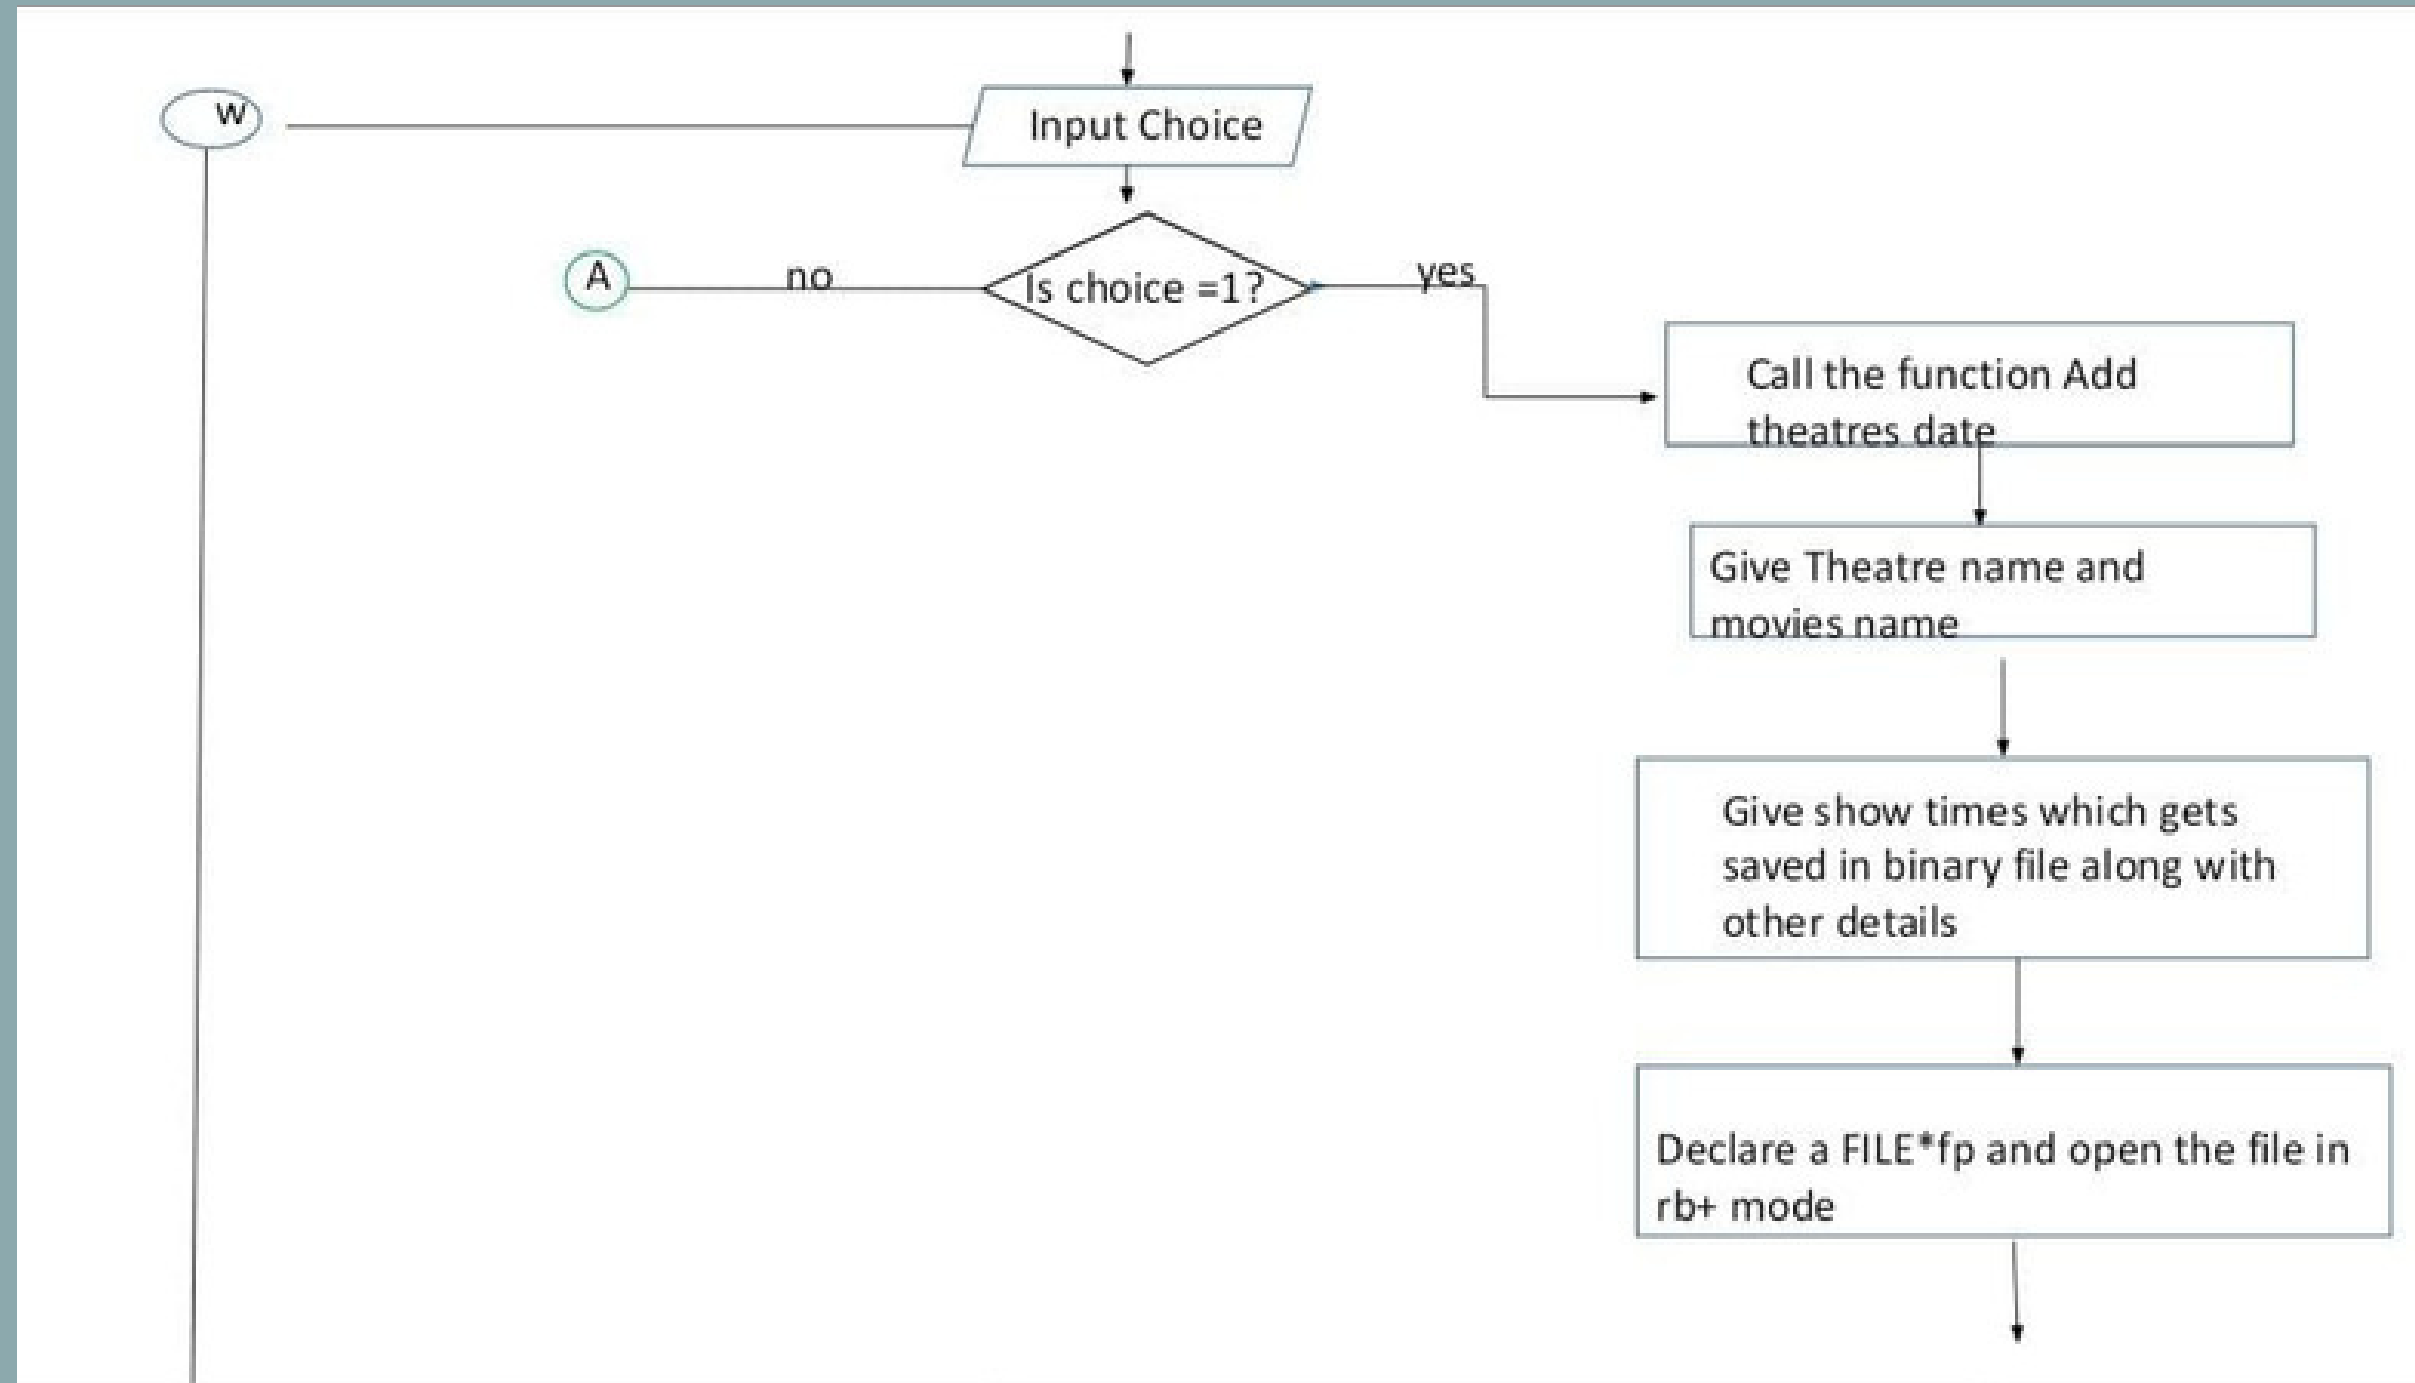

- STEP 28:Search for movies available on the specified date and print details.**
- STEP 29:Close file , goto 8.**
- STEP 30:In the range_of_dates() function:**
 - Open the binary file in read and write mode ("rb+").**
- STEP 31:If(NULL) ,print"Error in opening file" ,goto 8 ,else 32.**
- STEP 32:Take input for start and stop range of dates from the user.**
- STEP 33:Search for movies available in the specified date range and print details.**
- STEP 34:Close the file ,goto 8.**
- STEP 35:STOP**

MAIN MENU

***** Movies in a city*****

1. Add theatres list
2. List of all theatres
3. Movies available on a particular date
4. Movies available in a date range
5. Exit the program

Enter your choice:

CODE

```
#include <stdio.h>
#include <string.h>
#include <stdlib.h>

struct Movie {
    char theatrename[100];
    char moviename1[100];
    char *showtime1; // HH:MM
    char *showtime2;
    char *showtime3;
    int start_date;
    int start_month;
    int start_year; // DD-MM-YYYY
    int end_date;
    int end_month;
    int end_year;
} details;
```

```
void add_theatres_data();
void list_of_theatres();
void movie_available();
void range_of_dates();

int main() {
    int choice;

    do {
        printf("\t\t\t\t\t*****\n");
        printf("\t\t\t\t\t***** Movies in a city*****\n");
        printf("\t\t\t\t\t1. Add theatres list\n");
        printf("\t\t\t\t\t2. List of all theatres\n");
        printf("\t\t\t\t\t3. Movies available on a particular date\n");
        printf("\t\t\t\t\t4. Movies available in a date range\n");
        printf("\t\t\t\t\t5. Exit the program\n");
        printf("\t\t\t\t\tEnter your choice: ");
        scanf("\t\t\t\t\t%d", &choice);
```

CODE

```
